SUMMARY

Backend & Full Stack Developer graduating May 2026 (SGPA 8.89/10) with production experience shipping live applications using Node.js, Python, Java, and AWS. Built and deployed Interview AI, GrowthAffinity, and Tradeflow — a full-stack stock trading platform with Java Spring Boot backend, Flutter mobile app, and Docker deployment, Redis, and API Gateway. Hands-on with LLM integrations, background job systems, REST APIs, CI/CD, and Docker. Strong foundation in DSA, OOP, and system design.

TECHNICAL SKILLS

Backend: Node.js, Express.js, Python, Java, Spring Boot, Spring Security (JWT/RBAC), REST API Design, OAuth2

AI / LLM: Groq API (llama-3.3-70b), Google Gemini API, Web Speech API, LangChain (familiar), Prompt Engineering, VAD-aware pipelines

Audio/Real-time: SpeechRecognition, SpeechSynthesis, real-time audio chunking & transcription, sub-second response loops, ffmpeg (familiar)

Background Jobs: Redis (caching & queues), async job pipelines, background task workers, Celery (familiar)

CS Fundamentals: DSA, OOP, SOLID Principles, Design Patterns, LLD, HLD, Microservices, System Design, TCP/IP & Networking

Frontend: React.js, Next.js, TypeScript, Tailwind CSS, HTML5, CSS3, Flutter, Dart

Database: MongoDB, PostgreSQL, MySQL, Redis, DynamoDB (familiar)

DevOps: AWS (EC2, S3, RDS), Docker, GitHub Actions (CI/CD), Git, Linux/Ubuntu

Languages: JavaScript, TypeScript, Python, Java, C, C++ (familiar), Go (familiar)

EXPERIENCE

Freelance Backend & AI Developer — Remote, Self-Employed

Jan 2024 – Present

- Architected and maintained production REST APIs across 4 client projects serving 500+ users — secure auth, content workflows, and async data pipelines in Python and Node.js.
- Integrated LLM APIs and AI-powered features into backend services — prompt engineering, structured JSON output validation, and debugging of AI-generated content pipelines.
- Built real-time audio processing pipelines: microphone capture → speech-to-text → LLM dispatch → structured output → TTS playback — achieving sub-second end-to-end latency.
- Built background task systems and async job workers in Python/Node.js to handle heavy processing without blocking main threads — analogous to Celery/Redis job queues.
- Owned full SDLC — database design, Docker containerisation, CI/CD pipelines (GitHub Actions), and AWS EC2 deployment with production-grade monitoring and zero-downtime releases.

PROJECTS

Tradeflow — Stock Trading Platform | Java · Spring Boot · JWT · PostgreSQL · Docker · Flutter | [GitHub ↗](#)

- Built production-grade stock trading REST API with complete trading flow — JWT auth, wallet management, portfolio tracking, buy/sell orders and transaction history using Java Spring Boot
- Implemented role-based access control (USER/ADMIN) with Spring Security and global exception handling for clean API responses
- Containerized full application with Docker and Docker Compose with PostgreSQL for one-command deployment
- Flutter mobile app in development — Android/iOS with real-time stock updates via WebSocket

Smart Attendance System — Live Java Backend | Java · Spring Boot · FastAPI · PostgreSQL (Supabase) · JWT | [GitHub ↗](#)

- Designed a 3-tier microservice architecture — React Native mobile app captures classroom photo → Spring Boot REST API handles JWT auth, student CRUD, and image compression → Python/FastAPI ML service runs face detection and recognition → PostgreSQL (Supabase) stores embeddings and attendance records
- Implemented One-Shot Learning face recognition using 128-dimensional Dlib encodings with Euclidean distance matching (threshold 0.6) and in-memory caching — auto-marks multiple students present/absent from a single image with confidence-based filtering
- Exposed 6 production REST endpoints covering auth, student management, automated attendance, and daily analytics — with image optimisation (max 800px, 70% quality) to reduce payload size and improve API response time

GrowthAffinity — Live Production Platform | Node.js · MongoDB · Redis · Microservices · API Gateway | [Live ↗](#) | [Docs ↗](#)

- Built and deployed full production-grade platform with binary tree placement for left/right referrals and 30-level income generation logic — live at growthaffinitymarketing.com with real users
- Microservices backend with API Gateway, Redis caching & queues, centralized error handling, JWT cookie auth, and RBAC — applied HLD service decomposition and LLD/SOLID patterns throughout

EDUCATION

B.Sc (BCA) — Computer Applications · Patna College, Patna University

Graduating May 2026 | SGPA: 8.89/10

Class XII · Patna Collegiate, Patna

2023 | 79.80%

Class X · Dr. Zakir Hussain H/S, Patna

2021 | 90.80%

ACHIEVEMENTS & CERTIFICATIONS

- 400+ DSA problems solved on [LeetCode ↗](#) — consistent practice in arrays, trees, graphs, dynamic programming, and binary search in JavaScript and Python.
- Deloitte Australia — Technology Job Simulation (Forage) [View Certificate ↗](#) — April 2026 | Focus: Coding & Development.
- Active contributor on [GeeksforGeeks ↗](#) — backend engineering articles, DSA solutions, and system design write-ups.

Languages: English (Professional), Hindi (Native) | Interests: GenAI & LLM ecosystems, real-time audio/video pipelines, backend system design, cloud technologies, competitive programming
